'A Very Dangerous Medical Experiment': CDC Expands Vaccine Schedules for Kids, Pregnant Women and Most Adults

The Centers for Disease Control and Prevention published its 2024 vaccine schedules, which include at least 76 total doses of 18 vaccines for children 0-18. Experts criticized the expanded schedule for the lack of safety or efficacy testing of vaccines.

By **John-Michael Dumais**

Miss a day, miss a lot. *Subscribe to The Defender's Top News of the Day.* ***It's free.***

The Centers for Disease Control and Prevention (CDC) is recommending more vaccines and vaccine doses across the board for children, pregnant women and adults, according to the agency's 2024 immunization schedule.

The updated schedule triggered a flurry of news and reactions in recent days. However, the CDC released the updated schedule in September — months earlier than usual, to speed up insurance payments for newly recommended vaccines, the American Academy of Pediatrics reported.

The 2024 schedules include newly authorized recommendations for preventing COVID-19, respiratory syncytial virus (RSV), flu and pneumococcal disease.

"This amounts to nothing more than a very dangerous medical experiment foisted on America's infants and children," said Brian Hooker, Ph.D., senior director of science and research at Children's Health Defense (CHD) and co-author of "Vax-Unvax: Let the Science Speak."

Hooker told The Defender the CDC has never tested the efficacy or the safety of the entire childhood vaccination schedule.

"The Wuhan Cover-Up" by Robert F. Kennedy Jr. ORDER NOW

Integrative physician Dr. Mary Kelly Sutton told The Defender, "The CDC continues to function as a powerful promoter of vaccines, not as a protector of public health."

According to Sutton, who lost her license in three states for writing eight vaccine exemptions in California before the pandemic, there is little evidence of vaccines' effectiveness and a lack of officially accepted research on their adverse effects. She said:

> "The CDC could give wise guidance on vaccines but has so far accepted ACIP [Advisory Committee on Immunization Practices] approvals without studies. Universally, vaccines lack true placebo controls, and recently, lack human trials of any kind.
>
> "The sad truth is pharma money rules the CDC, and the American people (and the world) are deceived and placed at risk."

Commenting on the expanded vaccine schedule, Dr. Michelle Perro, a pediatrician and co-author of "What's Making our Children Sick?" told The Defender, "It's an outrage. It's not necessary, and they're hurting our children."

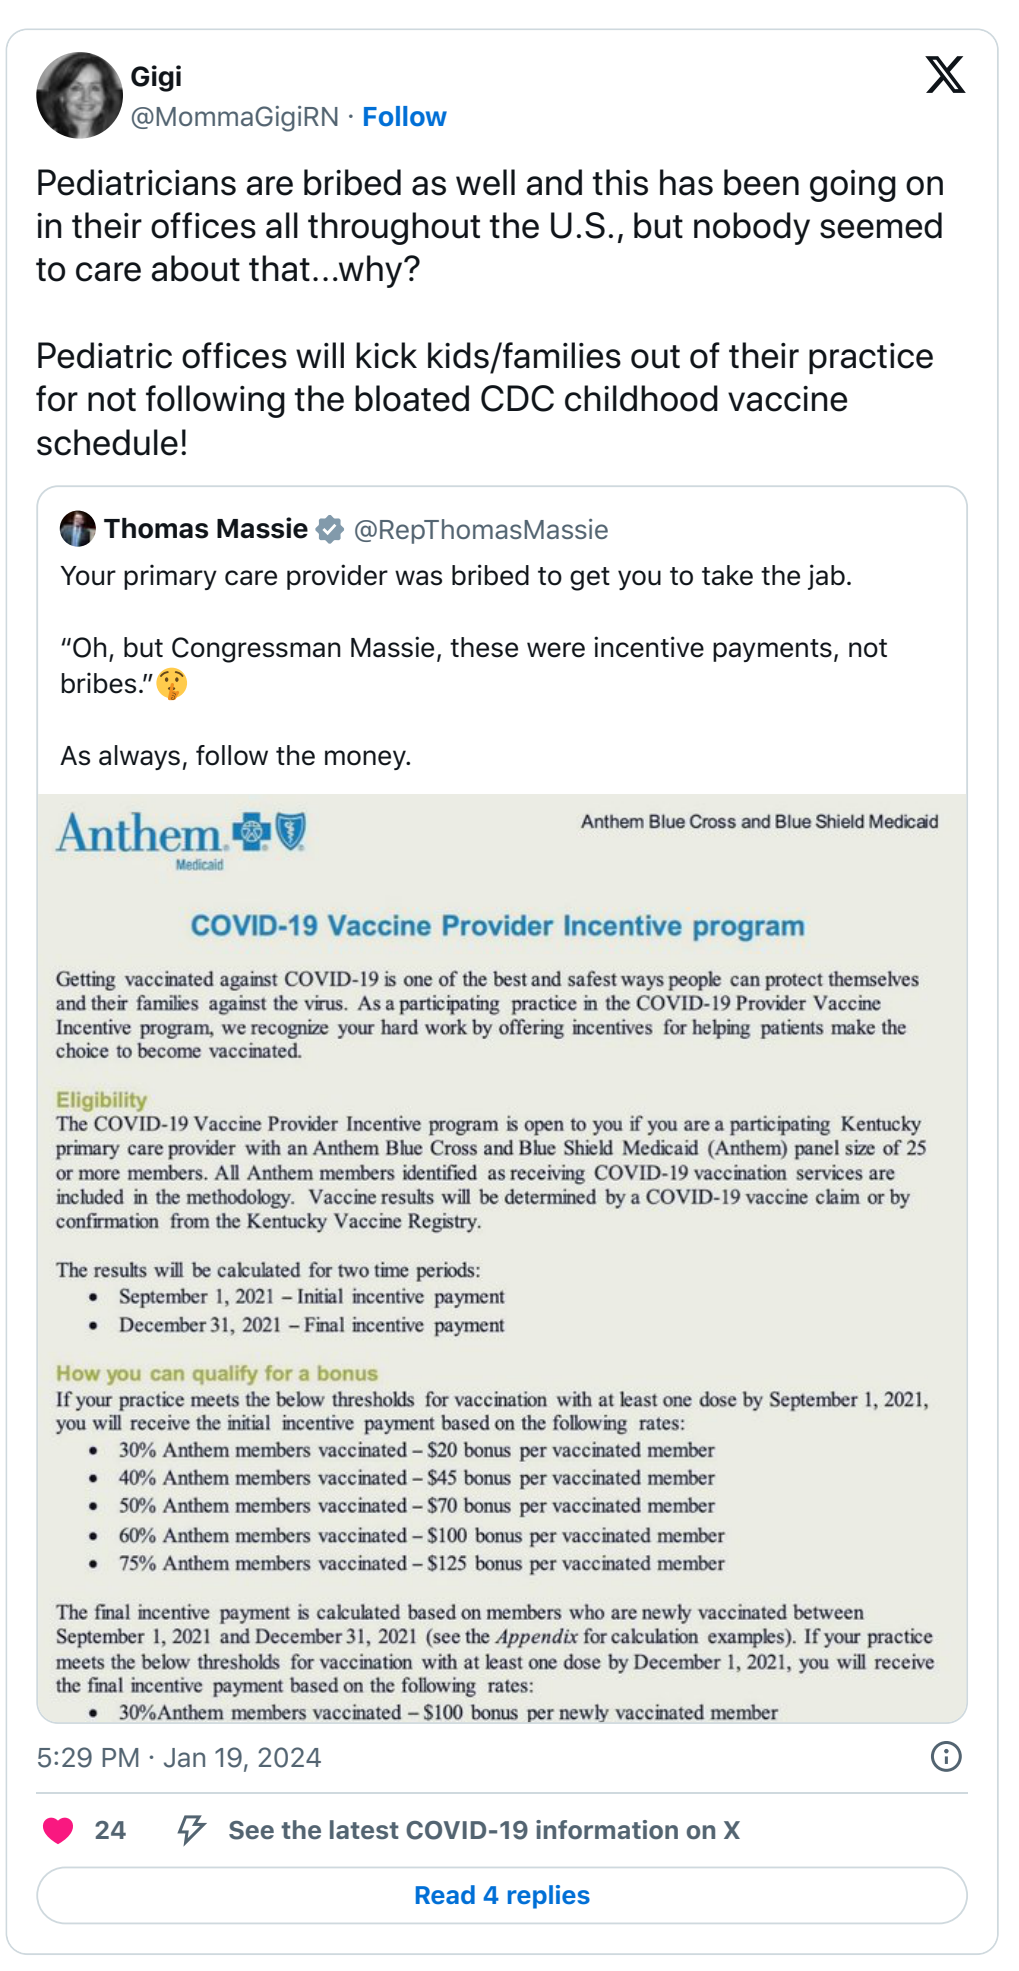
Perro criticized the financial incentives offered to doctors to vaccinate as many people as possible, and the reprisals against doctors for writing exemptions.



Gigi @MommaGigiRN · Follow

Pediatricians are bribed as well and this has been going on in their offices all throughout the U.S., but nobody seemed to care about that...why?

Pediatric offices will kick kids/families out of their practice for not following the bloated CDC childhood vaccine schedule!

Thomas Massie @RepThomasMassie

Your primary care provider was bribed to get you to take the jab.

"Oh, but Congressman Massie, these were incentive payments, not bribes."🤫

As always, follow the money.

Anthem Medicaid — Anthem Blue Cross and Blue Shield Medicaid

COVID-19 Vaccine Provider Incentive program

Getting vaccinated against COVID-19 is one of the best and safest ways people can protect themselves and their families against the virus. As a participating practice in the COVID-19 Provider Vaccine Incentive program, we recognize your hard work by offering incentives for helping patients make the choice to become vaccinated.

Eligibility
The COVID-19 Vaccine Provider Incentive program is open to you if you are a participating Kentucky primary care provider with an Anthem Blue Cross and Blue Shield Medicaid (Anthem) panel size of 25 or more members. All Anthem members identified as receiving COVID-19 vaccination services are included in the methodology. Vaccine results will be determined by a COVID-19 vaccine claim or by confirmation from the Kentucky Vaccine Registry.

The results will be calculated for two time periods:
- September 1, 2021 – Initial incentive payment
- December 31, 2021 – Final incentive payment

How you can qualify for a bonus
If your practice meets the below thresholds for vaccination with at least one dose by September 1, 2021, you will receive the initial incentive payment based on the following rates:
- 30% Anthem members vaccinated – $20 bonus per vaccinated member
- 40% Anthem members vaccinated – $45 bonus per vaccinated member
- 50% Anthem members vaccinated – $70 bonus per vaccinated member
- 60% Anthem members vaccinated – $100 bonus per vaccinated member
- 75% Anthem members vaccinated – $125 bonus per vaccinated member

The final incentive payment is calculated based on members who are newly vaccinated between September 1, 2021 and December 31, 2021 (see the *Appendix* for calculation examples). If your practice meets the below thresholds for vaccination with at least one dose by December 1, 2021, you will receive the final incentive payment based on the following rates:
- 30%Anthem members vaccinated – $100 bonus per newly vaccinated member

Childhood (0-18) vaccine schedule

After carefully reviewing the new CDC schedules, CHD's science team determined the likely minimum number for children ages 0-18 to be 76 doses of 18 different vaccines.

The number of doses could reach as high as 80, depending on the vaccine formulation being used and other factors.

By comparison, the CDC in 1983 recommended 11 doses of 7 vaccines by age 16, including the MMR (measles, mumps, rubella), DTP (diptheria, tetanus, pertussis), and polio vaccines.

Credit: Centers for Disease Control and Prevention

New immunizations on the childhood schedule include:

- RSV: Nirsevimab (RSV-mAb, brand name Beyfortus) the monoclonal antibody treatment for children 0 through 8 months (if the mother did not receive the RSVpreF vaccine during pregnancy — see more information in the pregnancy section below), and certain high-risk children through 19 months. Additional guidance was added for locations with RSV seasonality that differs from that of the continental U.S.
- Pneumococcal: a 20-valent pneumococcal conjugate vaccine (PCV20), targeting 20 strains of Streptococcus pneumoniae, in four doses: at 2 months, 4 months, 6 months, and 12-15 months. PCV20 replaces PCV13, the 13-valent pneumococcal conjugate vaccine.
- COVID-19:
  - For the Moderna mRNA shots:
    - For children 6 months-4 years old: Those who have not been previously vaccinated are recommended to receive two doses of the "updated" 2023-24 Moderna vaccine. Those who have received one dose of any Moderna vaccine (including the updated version) or two doses of the older version are recommended to receive one dose of the updated vaccine.
    - For children 5 years and older: Those who have received zero, one or two doses of the older vaccine are recommended to get one dose of the updated Moderna vaccine for their age group. If they have been previously vaccinated with at least one dose of the updated vaccine, no further shots are recommended.
    - Note the timing for additional doses noted in the guidance.
    - Note the different recommendations on Table 2A for people who are moderately or severely immunocompromised.
  - For the Pfizer/BioNTech shots:
    - For children 6 months-4 years old: Those who have not been vaccinated are recommended to take the three-shot series of the updated Pfizer/BioNTech vaccine. Those who have received one dose of any version (old or new) of the vaccine are recommended to get two more shots to complete the series. Those who have received two doses of any version (old or new) are recommended to receive one more shot to complete the series. Those who have received three or more shots of the older vaccine are recommended to get one shot of the new version. For those who have received three or more shots, including at least one dose of the new formulation, no further shots are recommended.
    - For children 5 years and older: For those who are unvaccinated or have received any number of doses of the older Pfizer/BioNTech vaccine, they are recommended to get a single shot of the updated vaccine for their age group. For those who have previously received any number of doses including at least one of the new formulations, no further shots are required.
    - Note the timing for additional doses noted in the guidance.
    - Note the different recommendations on Table 2B for people who are moderately or severely immunocompromised.
- Mpox (formerly monkeypox): Adults 18 and older who are at risk of mpox (gay, bisexual, transgender and nonbinary people with certain risk or exposure profiles) are recommended to receive the Jynneos vaccine. According to that guidance, the mpox vaccine appearing under the age-18 column on the childhood vaccine schedule is not expected to be administered to most children. Note that mpox clinical trials are currently underway for 12- to 17-year-olds.

Other changes to the childhood schedule include:

- DTaP (diphtheria, tetanus, pertussis for 0-6 year-olds): The note on this vaccine was revised to clarify primary and booster doses.
- Tdap (tetanus, diphtheria, and pertussis for 7-year-olds and older): The note was revised to clarify that the dose recommended for 11- to 12-year-olds is the adolescent booster dose.
- HPV (human papillomavirus): The routine vaccination section includes clarification about doses not recommended for those who have already completed the HPV series.
- Influenza: updated with recommended formulations for the 2023-24 flu season. Special notes about those with egg allergies have been removed; any person with a history of egg allergy can be vaccinated with these vaccines, according to the guidance.
- MMR: The note was updated to specify use for routine, catch-up and "special situation" vaccinations.
- MenB (meningococcal): Information about the newly licensed meningococcal A, B, C, W, Y vaccine has been added. A "shared clinical decision-making" document for individuals ages 16-23 was added.
- Pneumococcal: Sections have been updated for routine, catch-up and "special situation" vaccinations, with new recommendations for the use of the 15-valent pneumococcal conjugate vaccine (PCV15) and PPSV23, in addition to the information about PCV20 noted above.
- Poliovirus: New information has been added about catch-up vaccinations and increased risk exposure for 18-year-olds.

The CDC removed several vaccines from the schedule "because they no longer are distributed or recommended for use in the U.S." These include bivalent mRNA COVID-19 vaccines, the diphtheria and tetanus toxoid vaccine (DT) and Menactra, a meningococcal vaccine.

The CDC published revised "vaccine catch-up guidance" for children who have fallen behind the recommended schedule. This includes guidance for the pneumococcal conjugate vaccine, Haemophilus influenzae type b vaccines (with guidance for different products), vaccines containing diphtheria, tetanus and pertussis (with specific guidance for formulations for different age groups) and the inactivated polio vaccine (IPV).

Additional catch-up guidance can be found in Table 2 of the childhood schedule.

The higher number of doses cited by attorney Aaron Siri in his tweet may have included the assumption that there would be yearly or biannual COVID-19 boosters, which the CDC schedule does not (yet) call for.

If annual boosters are added in the future, this could push the total number of doses through age 18 close to 100, if boosters begin at age 2.

This page from my book "I'm Unvaccinated and That's OK!" talks about the insane vaccine schedule. drshannonkroner.com

The childhood vaccine schedule has grown a lot over the years. Doctors, scientists, and public health researchers continue adding new vaccines to the schedule without ever testing them in combination to see how all these vaccines interact with each other. Would you believe, I'm expected to get almost one hundred doses of seventeen vaccines by my eighteenth birthday?! That's a lot!

'Pregnant people' vaccine schedule

The vaccine list for pregnant women includes four different shots: pertussis (whooping cough), flu (if pregnant during flu season), COVID-19 and RSV, with the latter administered between 32 and 36 weeks of pregnancy. Abrysvo's inclusion on the childhood schedule is for pregnant adolescents only.

One dose of Pfizer's bivalent RSVpreF vaccine Abrysvo is recommended for "pregnant people" to prevent RSV from later developing in their babies, despite concerns about premature births that stopped the development of a similar vaccine by GlaxoSmithKline (GSK).

There are currently no ACIP recommendations for RSV vaccinations in subsequent pregnancies.

The CDC recommends only one COVID-19 booster (2023-24 formulation) during pregnancy if the individual was previously vaccinated with the two-shot series pre-conception.

RFK Jr. and Brian Hooker's *New* Book: "Vax-Unvax" ORDER NOW

Adult (19 years and above) vaccine schedule

Adult recommendations include a minimum of 80 total doses of the following vaccines from ages 19-79, not including COVID-19 shots:

- HepB (hepatitis B): Two, three or four doses, depending on vaccine or condition.
- Tetanus, diphtheria, pertussis (Tdap or Td): One shot every 10 years.
- Varicella (chicken pox): Two doses.
- Influenza: 61 annual vaccines.

New vaccines include:

- RSV: Either of two different vaccines for adults over 60 — GSK's Arexvy or Pfizer's Abryvso. Although the notes for this vaccine indicate it's primarily for "those considered to be at increased risk for severe RSV disease" — which includes many chronic diseases such as COPD, diabetes mellitus, cardiovascular diseases, etc. — the CDC guidance includes recommendations for those who are frail, of advanced age or who reside in nursing homes or other long-term care facilities. Currently, a single dose is expected to provide prevention for two seasons. Concerning subsequent RSV doses, the CDC stated, "Additional surveillance and evaluation activities are planned to assess how long the vaccines protect against RSV and whether additional doses will be needed."
- COVID-19: Those previously unvaccinated are recommended to receive the updated 2023-24 formulations (of the mRNA vaccines, one- or two-dose series, depending on brand). Those previously vaccinated with one or more doses of any COVID-19 vaccine are recommended to take one dose of any updated (2023-24 formula) COVID-19 vaccine administered at least eight weeks after the most recent COVID-19 vaccine dose. Note the guidance for persons who are moderately or severely immunocompromised, as well as precautions and contraindications.

Other vaccines adults might receive, depending on medical conditions, exposure and risk factors, include zoster recombinant (RZV) (shingles), MMR, HPV, pneumococcal (PCV15, PCV20, PPSV23), hepatitis A, meningococcal A, C, W, Y, meningococcal B, Haemophilus influenzae type b and mpox.

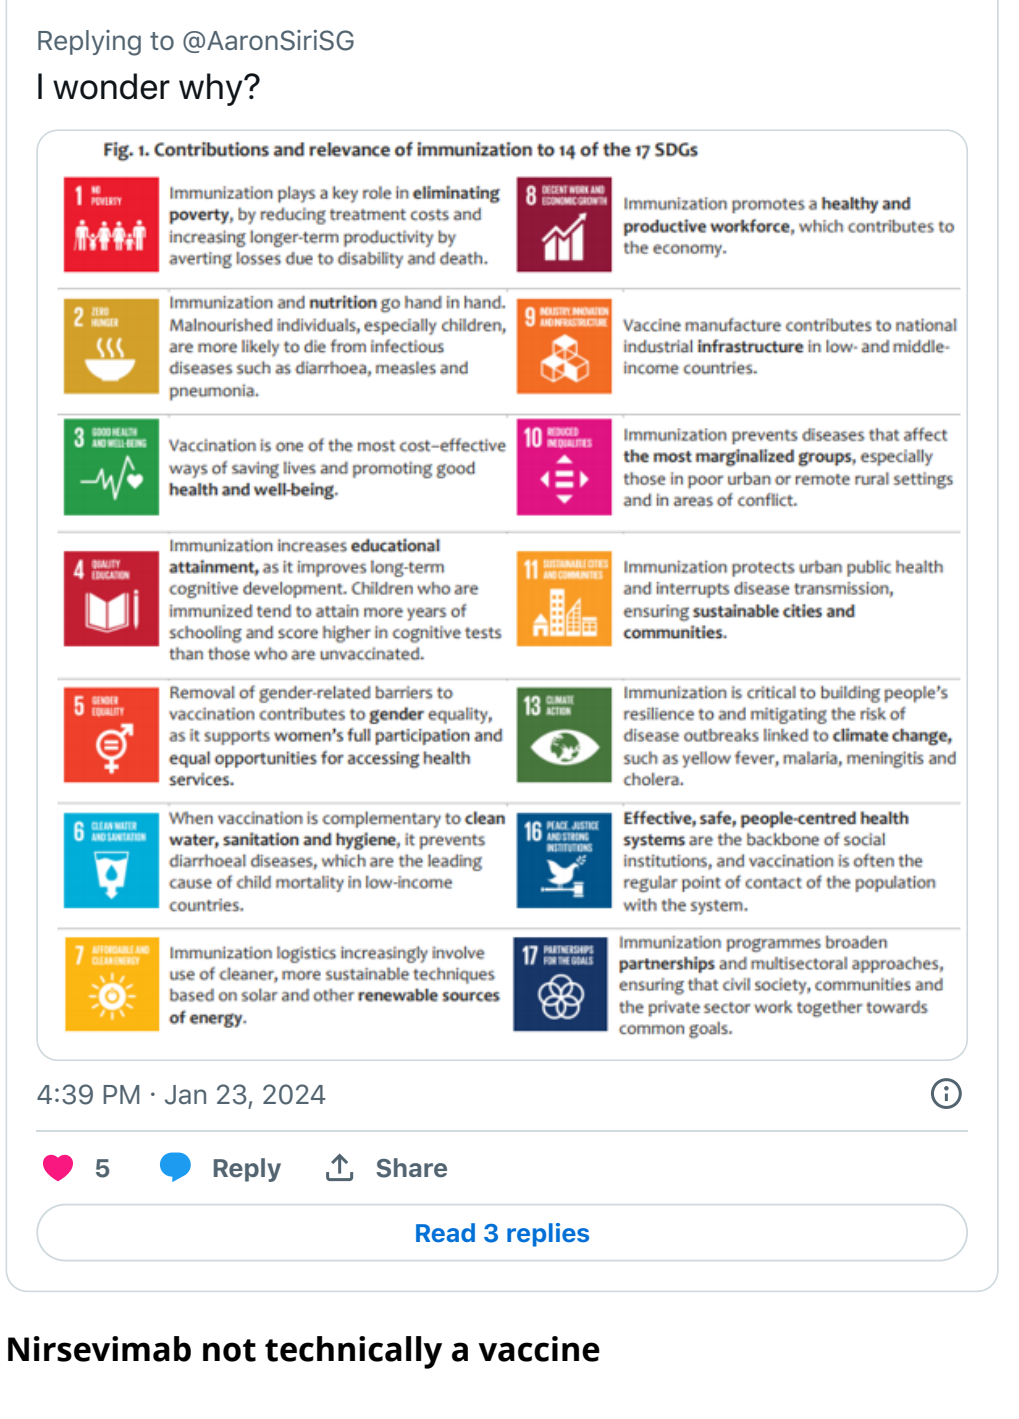
The CDC lists under "shared clinical decision-making" recommendations for:

- The HPV vaccine for adults ages 27-45 years old.
- The MenB vaccine for individuals 16-23 years old.

The CDC updated its guidance around egg-based allergies and influenza vaccines, now saying that any person with a history of egg allergy can be vaccinated with any influenza vaccine (corresponding to age and health status) "with no additional safety considerations."

All vaccine schedule changes can be found here.

One X user speculated about the role of immunizations and U.N. Agenda 2030, sharing a page from a World Health Organization (WHO) document titled "Immunization Agenda 2030":



Kentucky Statesman @ky_statesman · Follow

Replying to @AaronSiriSG

I wonder why?

Fig. 1. Contributions and relevance of immunization to 14 of the 17 SDGs

1 NO POVERTY	Immunization plays a key role in **eliminating poverty**, by reducing treatment costs and increasing longer-term productivity by averting losses due to disability and death.	8 DECENT WORK AND ECONOMIC GROWTH	Immunization promotes a **healthy and productive workforce**, which contributes to the economy.
2 ZERO HUNGER	Immunization and **nutrition** go hand in hand. Malnourished individuals, especially children, are more likely to die from infectious diseases such as diarrhoea, measles and pneumonia.	9 INDUSTRY, INNOVATION AND INFRASTRUCTURE	Vaccine manufacture contributes to national industrial **infrastructure** in low- and middle-income countries.
3 GOOD HEALTH AND WELL-BEING	Vaccination is one of the most cost-effective ways of saving lives and promoting good **health and well-being**.	10 REDUCED INEQUALITIES	Immunization prevents diseases that affect **the most marginalized groups**, especially those in poor urban or remote rural settings and in areas of conflict.
4 QUALITY EDUCATION	Immunization increases **educational attainment**, as it improves long-term cognitive development. Children who are immunized tend to attain more years of schooling and score higher in cognitive tests than those who are unvaccinated.	11 SUSTAINABLE CITIES AND COMMUNITIES	Immunization protects urban public health and interrupts disease transmission, ensuring **sustainable cities and communities**.
5 GENDER EQUALITY	Removal of gender-related barriers to vaccination contributes to **gender** equality, as it supports women's full participation and equal opportunities for accessing health services.	13 CLIMATE ACTION	Immunization is critical to building people's resilience to and mitigating the risk of disease outbreaks linked to **climate change**, such as yellow fever, malaria, meningitis and cholera.
6 CLEAN WATER AND SANITATION	When vaccination is complementary to **clean water, sanitation and hygiene**, it prevents diarrhoeal diseases, which are the leading cause of child mortality in low-income countries.	16 PEACE, JUSTICE AND STRONG INSTITUTIONS	**Effective, safe, people-centred health systems** are the backbone of social institutions, and vaccination is often the regular point of contact of the population with the system.
7 AFFORDABLE AND CLEAN ENERGY	Immunization logistics increasingly involve use of cleaner, more sustainable techniques based on solar and other **renewable sources of energy**.	17 PARTNERSHIPS FOR THE GOALS	Immunization programmes broaden **partnerships** and multisectoral approaches, ensuring that civil society, communities and the private sector work together towards common goals.

Nirsevimab not technically a vaccine

The National Vaccine Information Center wrote that nirsevimab (for children 0 through 19 months) is not technically a vaccine, but was added to the childhood schedule to give Sanofi and Astra Zeneca a liability shield and to get the monoclonal antibody treatment added to state mandates and vaccine registries.

Accordingly, the revised CDC schedule now states it is for "vaccines and other immunizing agents."

Credit: Centers for Disease Control and Prevention

Regarding liability, the CDC schedule states:

> "The National Vaccine Injury Compensation Program (VICP) is a no-fault alternative to the traditional legal system for resolving vaccine injury claims. All vaccines included in the child and adolescent vaccine schedule are covered by VICP except dengue, PPSV23, RSV, Mpox and COVID-19 vaccines. Mpox and COVID-19 vaccines are covered by the Countermeasures Injury Compensation Program (CICP)."

To date, the CICP has compensated just 11 claims out of nearly 13,000 filed for COVID-19 vaccine injuries.

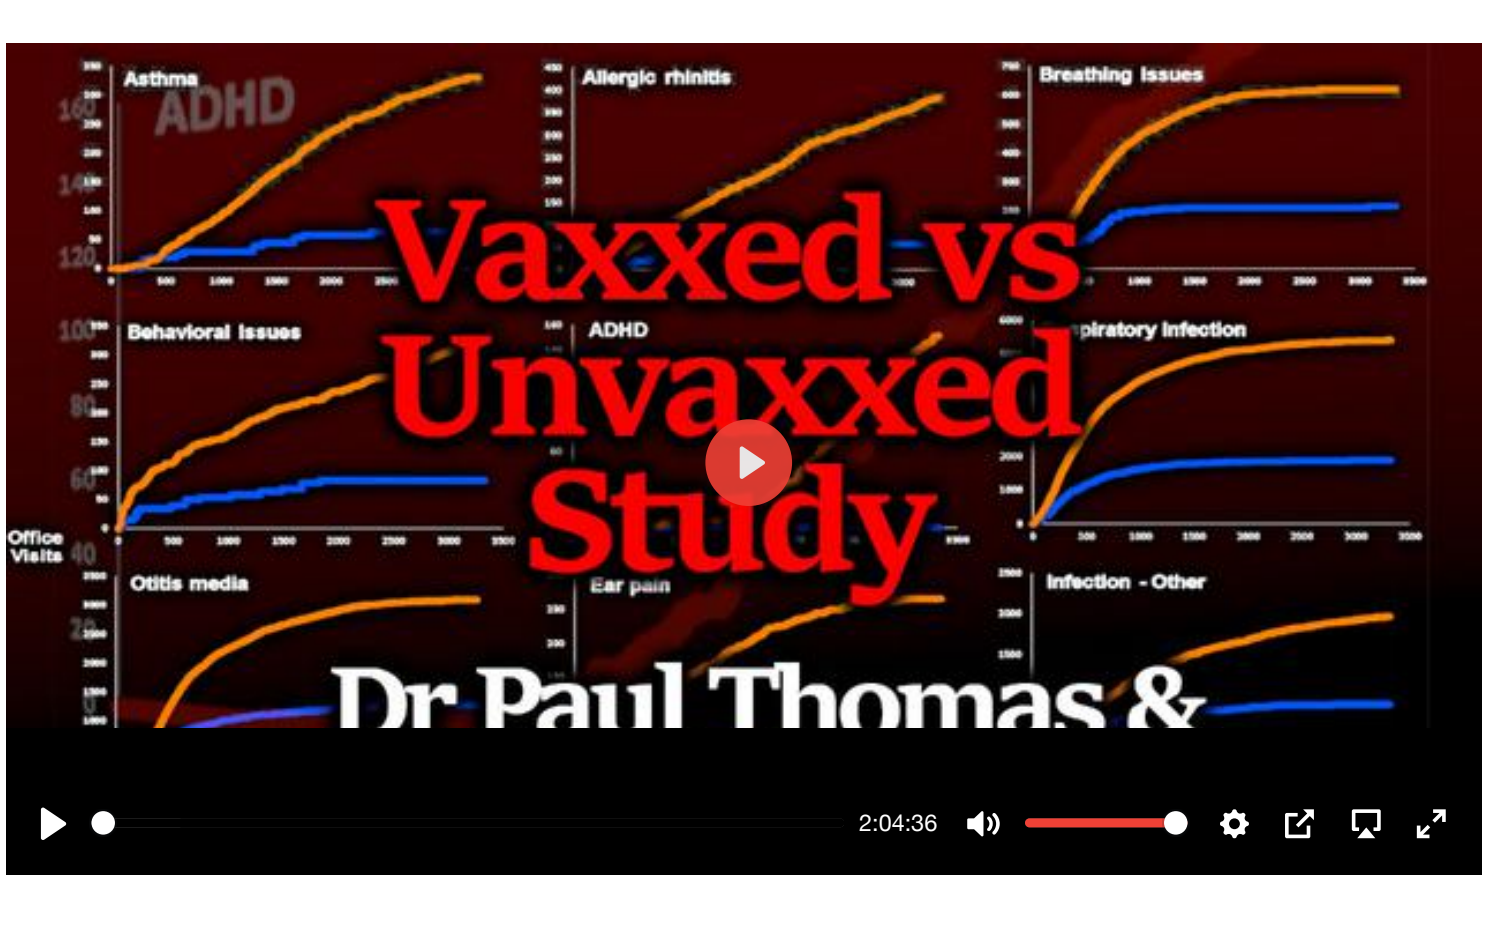
(In December, the Informed Consent Action Network, or ICAN, announced its support for a lawsuit against the U.S. Department of Health and Human Services to strike down the immunity protections and CICP provisions of the PREP (Public Readiness and Emergency Preparedness) Act, stating, "They violate the constitutional rights of those injured or killed by a COVID-19 vaccine.")

Do vaccine combinations cause more harm?

Dr. Paul Thomas, author of "The Vaccine-Friendly Plan: Dr. Paul's Safe and Effective Approach to Immunity and Health-from Pregnancy Through Your Child's Teen Years," commented on the lack of safety data on childhood vaccines, especially when combining vaccines.

"There is no study of the effects of the entire schedule," he said. "As we have added more and more vaccines, we have ever-increasing chronic disease, neurodevelopmental issues, autoimmune disease and allergies."

In this video, Thomas and James Lyons-Weiler, Ph.D., discuss their study of health outcomes in vaccinated versus unvaccinated children:



In their book, "Vax-Unvax," Hooker and Robert F. Kennedy Jr., CHD's chairman on leave, discussed studies indicating the potential harms of combining vaccines.

In one such study from 2012, comparing pregnant women receiving the flu shot, those receiving the shot in combination with the H1N1 vaccine were found to be 11 times more likely to have a miscarriage than those receiving the flu shot by itself.

The study's author, Gary S. Goldman, an independent computer scientist, suggested that the increase in fetal loss may have been due to the additional dose of thimerosal in the H1N1 shot, exposing the fetus to mercury.

Goldman is also the co-author of a 2011 paper showing that developed countries requiring the most vaccine doses for infants had the least favorable infant mortality rates.

Goldman and co-author Neil Z. Miller, director of the Institute of Medical and Scientific Inquiry in Santa Fe, New Mexico, in a paper published in February 2023 replicated those findings and responded to critics.

responded to critics.

In July 2023, they published a new study specifically examining the effects of two vaccines typically given to infants soon after birth — hepatitis B (HepB) and tuberculosis — from global data in 2019 and 2021. They found a strong link between vaccinations and rates of neonatal, infant and under-5 mortality for both years studied.

Another study included in "Vax-Unvax" reviewed the Vaccine Adverse Event Reporting System (VAERS) from 2005-2015 and found over 10,000 adverse events reports for infants receiving the HepB vaccine alone or with a multivalent vaccine, with 197 reports of sudden death syndrome (SIDS).

The chart below from "Vax-Unvax" shows the authors' analysis of SIDS cases reported to VAERS after the hepatitis B, Haemophilus influenzae B, diphtheria-tetanus-acellular pertussis, and pneumonia vaccines.

Credit: "Vax-Unvax" book, p. 129

ICAN last year raised concerns about combining the mpox, flu and COVID vaccines.

In March 2023 ICAN submitted a FOIA request to the CDC for evidence supporting claims made in its January 2023 tweet of a video from the White House MPox response Team stating, "You can get the #mpox vaccine at the same time as your #flu and #COVID vaccines."

Dr. Demetre Daskalakis, then-acting director (now director) of the National Center for Immunization and Respiratory Disease, after stating in the video that the vaccines could be taken together, only offered that a person "may" consider delaying their COVID-19 shot for four weeks after getting the mpox vaccine due to a "possible risk" of heart inflammation.

ICAN stated the CDC video neglected to mention the connection between the COVID-19 vaccine and myocarditis and other heart injuries, which are also associated with the flu shot and mpox vaccine.

In its response to ICAN, the CDC failed to produce any documents supporting the safe co-administration of the three vaccines.

On Dec. 18, 2023, ICAN issued a statement titled, "CDC has no data to support its tweet telling America that it is safe to give the monkeypox, flu, and COVID shots together."

We need to band together as a people, a loving society, and as a force to be reckoned with and say enough is enough! We are not going to follow your schedule because it is disastrous to the health of our cherished little ones. We need to point out the continuing health crisis of autoimmune diseases that are crippling our children. We need to paint all the people who are recommending the plethora of injections as lunatics who only care about money and are ignoring health. We must not stop until we have achieved our goal.

Is it the bribery or brainwashing, because they certainly have the intelligence to think critically when doing a calculus problem and pass the exam to get into medical school. Not questioning at that level points to more than brainwashing on such a logical group of people.
1 0 Reply • Share ›

Beatrice → brbg

I think doctors can be just as lazy as some parents and never question anyone because it's easier that way. Have you ever watched the Milgram experiments on utube? If not, look it up. It's quite remarkable how some people have been conditioned to put more faith in authority than themselves and are willing to break laws or cause harm just because they were told to.

On Dec. 18, 2023, ICAN issued a statement titled, "CDC has no data to support its tweet telling America that it is safe to give the monkeypox, flu, and COVID shots together."
This statement says it all!!!
They have no safety data, full stop.
It is time everyone woke up to the fact these people are not interested in your health. They are only interested in money and the sicker you are the more you are reliant on the very people who are making you sick!!
This is the decade of vaccination which 'they' have already told us. There are something like 200 new medications waiting in the wings to get the green light
Watch out and be prepared to say 'no'.
17 0 Reply • Share ›

The CDC can say whatever they want, we are hearing the ads of safety of c19 shots daily on the radio, no consequences. Parents are allowing this to happen. I know it means homeschooling in some states, but what is the health of your child worth. I guess they don't see the adverse effects in acute form so are duped into thinking there was no harm done. What they don't see are the changes that will lead to problems later. Short term gain for long term loss.
11 0 Reply • Share ›

Molly Malone → CastleConnell
4 days ago
You have a right to homeschool in every state, although some states will try to scare you. I've done it in several states and friends have done it in NY and MA. If your state is adamant about dangerous or questionable vaccines, try homeschooling. You don't even need a degree (so far), you just need to be willing.

And I remember waiting 15-30 minutes at the Dr's office for a possible reaction to a vaccine. 30 min. is nothing, reactions can happen weeks after the event! If doctors aren't aware of this, I fear for the children.

We've allowed drug companies to take over the medical industry. Of course they want more vaccines because they stand to make more money. The unfortunate part is people still believe a doctor can do no wrong. What they don't see is behind the doctor are the greedy drug executives and the population control advocates --joining forces to fleece money out of the masses before killing them off step by step.

I would guess a lot of people have mixed feelings about their medical "care" these days, but don't believe they can take care of themselves (self-education) or that there's any other healing modalities that are as effective as modern science's drugs & therapies...so they're stuck because of their own beliefs. People won't make the time to care for themselves- it's crazy upside-down.

The great majority of Republicans see the Covid vaccines as dangerous and unneeded. I think most Democrats at least subconsciously understand they are being pushed to get an unneeded shot, since they are NOT getting the boosters anymore. But not many of them are admitting to themselves they have had their bodily health destroyed for profit.

At this point the vaccine schedule can best be described as comical.

NO PROFIT SEEKING organization like the CDC should be permitted to make deicisons forcing people to use its products. The CDC is supported by taxpayers, but individuals in it obtain vaccine patents, which make them big bucks.. The CDC is a self-serving organization, which should not be able to force its patented drugs/vaccines on anyone. Per the Real Anthony Fauci and other information, It's research leaves much to be desired; as negative results in their creation of products...are hidden! Now it is out in the open with all the statistics showing ijnjuries and deaths from vaccines. Vaccines are dangerous and the CDC has no shame...it is still pushing them on innocent people. it's unbelievable, this low caliber organization called the CDC, which would do anything for money.

When this article started with a comment about early release ,to enable "Insurance Payments" to be approved for New Vaxxines. This sparked the Notion that there is "Deception and Deceit" . And Certainly can't be trusted…?
Most New Vaxxines have not been Tested…? Why Not.?
CDC are Now Vaxxine ProMotion company, Not for Protection or Adverse Reaction Results.? (No Results on things that aren't Tested.!)
There is No Evidence of Effectiveness or Results of AdverseEffects.?
CDC are relying on another Agency "A.C.I.P" on giving "Approval" (Without Testing)
Big pHarma Money , is corrupting CDC further.
Also Enticing Drs with "Bonus Payments" for Vaxxinating "AS MANY AS POSSIBLE.!"…..There will be "Reprisals" On Drs writing "Exemptions"…..?
New Quotas are Now Prescribed, for All youngsters (76 doses x 18 diff Vaxxines) with a possible 100 shots Administered from age of Birth to 18………?.?????
Does this sound "Safe….Plausible…..Necessary……Insane…..!"
A MASSIVE BOYCOTT is Required by Parents, to Protect their Children…..if you want to see GRANDCHILDREN…?

"76 total doses of 18 vaccines for children 0-18". Wow. I have a word for that: INSANITY.

The CDC is pushing vaccines because they have over 50 patent$ on them. Remember, "safe & effective" is a marketing term not a factual truth.

They need to move aggressively for getting injections for everyone. Otherwise, the plan that they have concocted so long ago and worked on it so hard (investing billions of $) is going to fail. Also, they want to use the inertia created by the shock treatment that was two fold between good hearted, rational thinkers, who had difficulties to believe in the astonishing level of lies reaching genocidal tendencies hoping that it all must be due to greed and medical negligence, to others who are deeply indoctrinated to the point of being completely blinded by the propaganda coming from the "trusted" authorities. They certainly don't want anymore people to be awaken by admitting the smallest flaw related to the "amazing" mRNA life saving, safe and effective technology that is the future for all kind of therapies going forward.

It is crucial to get rid of all control groups, that way they can never be blamed for harms, which will be assigned to everything but.

How is a child's immune system supposed to grow and develop immunity through their early years if it's constantly assaulted by vaccines?

It's not supposed to. They make the children life-long patient customers from their first breath.

September 10, 2020 Robert Kennedy Jr: CDC Is A Privately Owned Vaccine Company!

Robert F. Kennedy Jr. claims the CDC owns patents on at least 57 different vaccines, and profits $4.1 billion per year in vaccination sales.

I looked at the chart for children, the number of injections they get starting at birth and the first few months of life, it is a wonder that any children have any immune system left after all those. The schedule IMO is dangerous and criminal.

everyone knows that the OLD STYLE vaccines 'egg based', grown in the presence of slurry of viral pieces, pathogens and chemicals were extremely damaging and KILLING already. BUT everyone also knows that the covid injections were GENE based products reprogramming the human genome!!!! This article seems to say exactly what CDC is doing, throwing ALL injections in one POT!!!! Without saying that it is all safe, of course... That's a HUGE DECEPTION, and it makes me wondering is the GENETIC MODIFICATION of the entire HUMANITY something what CHD is DELIBERATELY COVERING UP AT ALL TIMES, while being more controlled opposition then anything else?? For an INFORMED CONSENT, all what is needed is the INGREDIENTS LIST, the rest everyone can figure out. This article in that respect is COMPLETELY USELESS!!!!

When I was younger and thought about having children, it never occurred to me that I would need to worry about vaccine safety. In those days we worried about our kids being kidnapped on their 8 block walk to school or being bitten by a snake, falling off the slide and breaking a bone, or making friends with the wrong crowd and ending up in a car with a drunk driver. Today, even though I am childless and now, without my dog, I still develop severe anxiety when I imagine adopting another pet and being forced to visit a veterinarian or having to find ways to skirt around the county vaccine laws. Medicine overall has cast such a stifling darkness over our world. It's difficult to imagine trusting any doctor to cast light, love and healing upon this planet.

Parents your backs are to the wall, little choice but to homeschool if you don't want to play roulette with your kid's health. I imagine if enough parents began to homeschool, there would be new laws mandating shots to homeschool. This is an abominable trap. Parents need to wake up and fight against this control over their kid's health, where pharma is protected. We know now that the docs make money when they push the shots, they are businessmen primarily not health providers. Wake up! A subset of parents has been fighting for years against this regime, but it is a numbers game, and the majority need to step up. What is it going to take, honestly, I think most parents are being selfish to not do the work of investigation and just blindly follow the advertising, the CDC and their pediatricians making extra money from the schedule.

I've woken up, and it's probably going to kill me, but I am going to home school. My kids are still very young, and I lie awake at night worrying about what we're up against, certainly feels like my back is to the wall. I'm in a unique situation with my kids, as they are foster children (one is adopted, the other is in process), so The State has been in tune with our lives, nearly every aspect. I literally sweat and nearly start shaking when we have to go to the mandatory well child checks. I know the only thing they care about is how many injections can they do. It has been scary, but I've stood my ground as much as possible, and both of the kids have had very few of the scheduled injections. I think it's a terrible practice when parents and patients fear what may come from a routine office visit.
But yes, you are correct, MANY more need to step up before the powers that be will get reigned in. ✌

Children's Health Defense® is a 501(c)(3) non-profit organization. Our mission is to end childhood health epidemics by working aggressively to eliminate harmful exposures, hold those responsible accountable and establish safeguards to prevent future harm. We fight corruption, mass surveillance and censorship that put profits before people as well as advocate for worldwide rights to health freedom and bodily autonomy.
